# Residency Components

Residents will develop essential skills and knowledge in various areas of pharmacy practice over the course of the program, including:

- Pharmacy Leadership and Compliance
- 340B Drug Pricing Programs and their impact on covered entities
- Medication Therapy Management (MTM)
- Centering Diabetes Care and counseling newly diagnosed diabetic patients
- HEDIS Measures and Quality of Care

Residents at FHCSWF will have the unique opportunity to learn from pharmacists involved in multiple aspects of population health at our centers. Over the course of their appointment, residents will develop and lead a medication reconciliation post-discharge program for patients unable to come to an in-person office visit within the 2 weeks following hospital discharge. Additionally, required projects will encourage residents to develop and implement new pharmacist-led programs (e.g. coumadin clinic, specialty pharmacy designation) and will focus on quality of care improvement.

# Residency Purpose

Family Health Centers of Southwest Florida's PGY1 Community-Based Pharmacy Residency Program offers a comprehensive outpatient training opportunity at a Federally Qualified Health Center. Residents will have the opportunity to improve outcomes for patients with diabetes, hypertension, depression, cardiovascular diseases, respiratory diseases, and chronic kidney disease, as well as other disease states commonly encountered in primary care practice.

# Service Lines

- Adult Medicine
- Women's Health
- Pediatrics
- Dental
- Optometry
